Overseas bases meeting needs worldwide

Furukawa Electric has built a global network that responds to customer demand and earns customer confidence by quickly delivering products of excellent quality at highly competitive prices.

More than **121** Group companies in total

Technological Genealogy

–History of multifaced technologies and products–

Having started with copper refining and electric wire businesses, our company has broadened its technological capabilities by staying ahead of the times and responding to societal needs. In the process, we have released numerous leading technologies and products. These technologies have contributed greatly to the realization of products that help build a safe and secure society, improve environmental performance, and support comfortable lives.

Contributing to the realization of a sustainable society

In 1884, Furukawa Electric started smelting copper in Honjo, Tokyo and manufacturing electric cables in Takashima-cho, Yokohama. The Furukawa Group's founder, Ichibei Furukawa, is said to have worked to build a new Japan with the aim of "making Japan brighter." We have inherited this idea from him and will continue seeking to "make the world brighter" as a unique player with diverse material technologies in fields such as infrastructure and automobiles.
